3. (Cancelled)
4. (Cancelled)
5. (Cancelled)
6. (Currently Amended) An improved stirrer, comprising:

a solid circular disc having an upper surface and a lower surface and a central bore in an axial direction;

a shank having a first end and a second end, and wherein said first end is constructed and dimensioned to fit into a chuck of an electric drill for rotation thereby and said second end extends through said central bore to said circular disc and is attached to said circular disc;

a plurality of flat rectangular shaped upwardly and downwardly extending blades having upper and lower ends disposed with the upper and lower ends above and below the disc to thereby form a frameless structure and configured and dimensioned to extend beyond said upper and said lower circular disc surfaces in an axial direction, as well as extending outwardly in said peripheral direction away from the disc, and wherein each of said plurality of blades inclined at about 40 to 50 degrees from where a radius of the disc intersects the blade in a counter clockwise direction relative to said shank; and,

whereby a liquid that is stirred by the stirrer enters from gaps between two adjacent blades around the circular disc and discharges upwardly and downwardly away from the circular disc.
